

Economics at Seafish

Seafish Economics provides expert research and analysis in sector performance, fisheries management and industry advice and consulting.

What we do:

- Inform business and policy decisions to help improve profitability for the seafood industry
- We are the UK centre of expertise in fisheries economics and seafood industry analysis
- Provide a bespoke business consulting service
- Provide fisheries economics advice to industry bodies, RACs, government departments and to the EU
- Provide strategic advice via publications, strategy workshops and government strategy groups

Our areas of expertise

- ✓ Fleet economics
- ✓ Processing sector analysis, processing sector performance monitoring and trend analysis
- ✓ Economics for fisheries management
- ✓ Consulting projects
- ✓ Survey design & analysis
- ✓ Modelling and forecasting financial performance
- ✓ Economic impact assessment
- ✓ Cost benefit analysis
- ✓ Strategic analysis, scenario building, business planning

Sector analysis

Data is collected annually on the financial performance of vessel and processing businesses giving us in-depth understanding of the sectors. The resulting data sets form the basis of our expert analysis, advice, outlook work, modelling and forecasting.

Economic Impact Assessment

Our economists can carry out economic impact assessments. This might be in relation to long term management plans, proposed closed areas or other policy options.

Business Advice

The Economics team at Seafish includes industry analysts who can provide practical advice to industry helping to improve efficiency, review strategy and increase sales.

Informing policy

Our work regularly informs policy development to support a sustainable, profitable industry. Our economists understand the special issues of exploiting a common resource and can provide advice on suitable solutions to fisheries management issues.
