*The Hazard List is a collection of potential fishing hazards supplied to Kingfisher from across all offshore industries. Potential hazards will be listed for 6 months.*
Exposed Cable Sections – SHEFA 2 Subsea Cable

The Shefa-2 submarine cable, running between Banff, Orkney, Shetland and Faroes has suffered from several cable breaks since deployment in 2007. A re-deployment was completed successfully late in 2014 and the majority of exposed areas are now buried.

However, Shefa urgently has to stress that a further few areas of the Shefa-2 segment 7, 8 & 9 are unburied and therefore exposed. Especially we need to highlight a limited exposed area on the segment running between Manse bay in Orkney and Banff in Scotland between the following positions:

A: 58°47.208’N 002°46.617’W and
B: 58°47.300’N 002°46.763’W

This area represents a hazard to fishing and should be avoided at all times. The latest route of the cable may be seen on the KIS-ORCA Fishing Plotter disk released January 2015 and may be downloaded from www.kis-orca.eu/downloads

For a copy of the Kingfisher Awareness Flyer, showing the exposed sections of SHEFA from December 2013, please contact the undersigned. Alternatively, click on the link below, or visit www.kingfishercharts.org

Notice to Fishermen

**Cable Recovery – UK-Germany 6**

Cable ship Pierre de Fermet has planned work in th ZEE Brisitish waters on the 8th March 2016 For 3 days. The Type of work is Cable Recovery using grapnels and ROV. 9.3km of cable to recover between the following positions:

- 54°25.972'N 00°21.986'E
- 54°23.365'N 00°41.695'E

For further information: Willy Poulain, C S Pierre de Fermet, VSAT +33 968 900 043 Tel: +33638 411 332 email: chefmis.fermat@orange.com

---

Notice To Fishermen

**Cable Repairs – Concerto 1 North**

Recently there have been several repairs to the Concerto 1 North cable due to the mobile nature of the seabed. These repairs are post repair buried but remain more vulnerable than other sections of the cable. For all details of the current status of the cable please see the up to date Kingfisher Awareness Flyer. This may be obtained by clicking the link below or by visiting www.kingfishercharts.org

For further information:
Neil Donovan, Interoute Communications Ltd, e-mail: neil.donovan@interoute.com

---

Notice to Fishermen

**Hazardous Condition of Cable – Ulysses South Landing (St Margaret’s Bay)**

Please note that further to earlier notices, the Ulysses South submarine cable landing at St Margaret’s Bay, near Dover, remains broken at position: 51°08.70'N 01°24.06'E. This position lies approximately 1.3km offshore in a water depth of 15 metres.

As a result of this fault, the cable at the approaches to St Margaret’s Bay has been dragged an indeterminate distance to the north of its as laid route on either side of the fault position. Caution should therefore be exercised in this area until the cable repair operation has been carried out.

A map of the hazardous position may be seen by clicking on the ‘Map Link’ in the top right corner

For further information: Steven Bennett, Global Marine, Tel: +44 7557 908179 email: Steven.bennett@globalmarinesystems.com
**Notice to Fishermen**

**Cable Survey – FAB Subsea Cable (English Channel)**

Published: 7 January 2016 | Latest Update: 7 January 2016

Survey activities for the proposed interlink power cable between France, Alderney and Britain are underway. The cable is due to be installed in 2018, however, marine survey operations in the nearshore areas in France, Alderney and Britain are scheduled to commence on or around 7th January 2016 for up to 4 weeks duration.

Survey vessels MPR3 operated by survey company MMT will undertake geotechnical surveys in the nearshore areas of the proposed cable route for the planned FAB link Interconnector power cable.

A map link of the proposed route may be seen in the top right of this notice.

**Notice to Fishermen**

**Exposed Cable Sections – Apollo South Cable (Southwest Approaches)**

Published: 08 October 2015 | Latest Update: 08 October 2015

On behalf of Apollo SCS Ltd, fishermen are advised that following a recent repair to the Apollo South subsea telecoms cable there now exists a section of exposed/unburied cable in the vicinity of 49°04.76N Long 006°41.59W

Due to the nature of the seabed in this area the cable is exposed and could be a hazard to fishing. Fishermen are asked to ensure that they have the route of the Apollo South cable accurately plotted on their fishing charts. Trawler skippers are respectfully asked to exercise caution when trawling in the vicinity of the Apollo South cable and to keep beyond a distance of at least 500 metres from the charted cable route and where at all possible to avoid trawling directly over the cable route. Static gear fishermen are advised not to deploy anchors and end weights in close proximity of the cable.

For further information: Colin Richards, Apollo SCS, Tel: +44(0) 1404 46323  email: colinrichards@networkmarinefsnet.co.uk

---

**Notice to Fishermen**

**Exposed Cable Sections – CIEG Guernsey (Jersey 90kv Subsea Power)**

Published: 16 April 2015 | Latest Update: 16 April 2015

Please be advised that due to recent repair works, two sections of cable remain unburied. Cables and joints are lying exposed on the sea bed and are a hazard to fishing and at risk of being damaged.

**Cable Repair 1 – Jersey to Guernsey (2012)**

The repaired sections lay between 49°22.736'N 002°29.220'W and 49°22.360'N 002°28.494'W and has a hairpin bight facing west south west extending for 370 meters to 49°22.610'N 002°29.412'W as shown in the image within the Map Link.

**Cable Repair 2 – Jersey to Guernsey (2015)**

The repaired sections lay between 49°26.965'N 002°31.422'W to 49°26.873'N 002°31.125'W where it then heads south to 49°26.584'N 002°31.191'W. The hairpin bight facing west south west extending for 70 meters to 49°26.887’N 002°31.321’W as shown in the image within the Map Link.

Please exercise caution when carrying out work such as trawling in these areas.

For further information: Heidi Le Noury, Channel Island Electricity Grid, Tel: +44(0)14781 241977, Email: Heidi.LeNoury@electricity.gg
**Notice To Fishermen**

Published: 02 June 2015  |  **Latest Update:** 02 June 2014

**Hugo Seg 1 – Cable Repairs**

Following a recent work on the Hugo subsea cable, there remains vulnerable and hazardous sections. Due to the nature of the sea bed, although all efforts had been made to bury the cable and associated joint boxes, only minimal or reasonable coverage was achieved.

**Section 1 – Repair section of over 4km including final splice bight (minimal coverage)**
Extreme caution should be exercised if working between: 49°39.163N 004°59.495W and 49°38.310N 004°56.427W

**Section 2 – Repeater installation at 49°35.576N 4°46.785W (minimal coverage)**
Extreme caution should be exercised if working between: 49°35.657N 004°47.079W and 49°35.519N 004°46.553W

**Section 3 – Repeater installation at 49°36.675N 3°35.045W (reasonable coverage)**
Caution should be exercised if working between: 49°36.671N 003°35.332W and 49°36.675N 003°34.752W

A map of the cable repairs/installations can be seen by clicking on the ‘Map Link’ in the top right corner

For further information: Jon Ford at Vodafone, Tel: +44 7776 165571 email: jon.ford@vodafone.com
Notice to Fishermen

**Cable Repair – UK – Hibernia Segment A**

Global Marine Systems Ltd has been contracted to undertake an emergency repair to the Hibernia Segment A submarine fibre optic telecommunications cable in the Irish Sea.

Unfortunately due to weather conditions experienced, the CS Wave Sentinel was forced to depart the site and return to Portland to await an appropriate weather window to complete the operation.

The cable had not been recovered and so no cable buoys remain in situ.

The CS Wave Sentinel. The estimated location is 53°55.127’N 04°29.619’W and the duration of the cable repair will be approximately 5 days depending upon weather or other operational conditions.

The vessel will be limited in manoeuvrability and other vessels should maintain a distance of at least 1NM from the cable ship during operations, and 1/4NM from any cable buoys in place during the course of the repairs for safety.

For further information:
John Wrottesley, Global Marine Systems Ltd, Tel: +44 (0)1245 72009  email: John.Wrottesley@globalmarinesystems.com

---

Notice to Fishermen

**Cable Repair – ESAT2 Irish Sea**

Global Marine Systems Ltd has been contracted to undertake an emergency repair to the ESAT2 submarine fibre optic telecommunications cable in the Irish Sea within Irish TW.

53° 21.133’N 006° 01.523’W

The CS Wave Sentinel is scheduled to arrive on site AM Monday 22nd February 2016 to commence works. The weather is currently being monitored and this timing could change depending on local conditions. The estimated location is shown on the attached overview, and the duration of the cable repair will be approximately 5 days depending upon weather.

The vessel will be limited in manoeuvrability and other vessels should maintain a distance of at least 1NM from the cable ship during operations, and 1/4NM from any cable buoys in place during the course of the repairs for safety.

For further information:
John Wrottesley, Global Marine Systems Ltd, Tel: +44 (0)1245 72009  email: John.Wrottesley@globalmarinesystems.com
Mariners are advised that work on the installation of the second deep water cable of the Western HVDC Link in the Irish Sea is due to start late March / early April 2016. Installation campaign will take place over a distance of about 120km, starting to the west of the Isle of Man and finishing in the southern part of the Firth of Clyde.

This cable laying Campaign will involve a pre-lay survey of the cable route, a pre-lay grapnel run, then the laying of the cable, and finally a post-lay survey. All of this work will be carried out by the vessels Go Pegasus IBPU and Giulio Verne V7CE4. The work will be carried out between the following locations:-

- Start: 54° 21.352'N 005° 14.279'W  
  Finish: 55° 15.907'N 005° 12.012'W

Pre-Lay Survey and Pre-Lay Grapnel Run
In advance of the cable lay and burial operations, the vessel Go Pegasus will carry out a survey along the route using a Remotely Operated underwater Vehicle (ROV). This will include a survey of the pre-lay mattresses that were installed at cable and pipeline crossings along the route during 2015. This survey is expected to commence on the 10th March. Sonar markers will be installed at these crossings to ensure that the cable is layed across these mattresses. After surveying the route, the PLGR is expected to commence on the 18th March 2016.

Cable laying and burial
Cable laying and burial work will be carried out by the cable laying vessel Giulio Verne, accompanied by the vessel Go Pegasus. During cable laying operations, the Go Pegasus will follow the Giulio Verne at a distance of approximately 500m, and will tow a cable burial plough, providing for simultaneous burial.

The cable will not be buried where it crosses existing cables or pipelines, and also at locations where the seabed character has prevents cable burial. At crossing locations and other areas where the cable is exposed, guard vessels shall monitor the cable until appropriate post-lay protection can be carried out. The cable crossings and locations of exposed cable are all specified in the latest Notice to Mariners (available here).

Vessels are requested to pass at a safe speed and distance from these locations and fishing vessels are advised to remain a safe distance (approx. 1.5 nautical miles) from the areas identified to ensure the safety of the vessel and its crew.

The Notices to Mariners currently issued for this project are:-

- **Deep Water Cable Installation (Campaign 2)** - this is the activity described above. Cable installation campaign 2 is due to be carried out between April and June 2016. The notice can be downloaded [here](#).
- **Route clearance, Out of Service Cables** - this notice advises of work being carried out at 7 locations along the cable route to remove out of service cables that would prevent the burial of the Western HVDC Link cable. The notice can be downloaded [here](#).
- **Wet storage of cable** - this notice advises of the surface laying of a 28km stretch of cable in temporary "wet storage" along part of the Western HVDC Link cable route. The notice can be downloaded [here](#).
- **Deep Water Cable Installation (Campaign 1)** - this was carried out by the vessel Giulio Verne, starting in July 2015. The most up to date Notice to Mariners can be downloaded [here](#).
- **Concrete mattressing** - along the cable route concrete mattresses have been laid at crossings of existing cables and pipelines. A notice to mariners about the mattressing campaign conducted earlier this year can be downloaded [here](#).

Notice to Fishermen  

Published: 11 February 2016  |  Latest Update: 11 February 2016

Cable Repair – Emerald Bridge Irish Sea

Global Marine Systems Ltd has been contracted to undertake an emergency repair to the Emerald Bridge submarine fibre optic telecommunications cable in the Irish Sea within UK TW at the following position:

53°15.078'N 004°50.830'W

The CS Wave Sentinel has been able to complete the repair and is on passage back to Portland to await a suitable weather window to complete the operation. The vessel will be limited in manoeuvrability and other vessels should maintain a distance of at least 1NM from the cable ship during operations, and 1/4NM from any cable buoys in place during the course of the repairs for safety

For further information: John Wrottesley, Global Marine Systems Ltd, Tel: +44 (0)1245 72009  email: John.Wrottesley@globalmarinesystems.com

Notice to Fishermen  

Published: 16 July 2015  |  Latest Update: 15 December 2015

Moyle Returns Cable Project – Rock Protection

The vessel Rockpiper completed rock protection work on the southern Moyle returns cable on the 14th December 2015.
Maps that show the locations where rock has been placed on both the North and South cable routes, along with a spreadsheet for each cable that shows the latitude and longitude of the locations where rock has been placed, along with the actual tonnage of rock that has been placed at each location can be downloaded below.

North cable: Maps 1 - 2 - 3 - 4 - 5; Spreadsheet.  South cable: Maps 1 - 2 - 3 - 4 - 5; Spreadsheet.

Further cable protection work is scheduled for shallow water sections of the cable during early summer 2016. Divers are due to carry out trenching works in waters shallower than 5m deep at both the Scottish and Northern Irish ends of the south cable. A small barge will be used to carry out rock placement works in waters between 5-12m deep.

The cable has been protected in these shallow waters with uraduct and iron casings as a precaution prior to the completion of inshore protection works.

Guard vessels have been stationed during cable installation and burial to ensure the safety of marine users. These guard vessels have now been stood down from the project.

For further information: Jim Andrews, Fisheries Liaison Officer, Tel: +44(0)7908225865  email: jim@awjmarine.co.uk

Notice To Fishermen

Published: 19 December 2013 | Latest Update: 13 June 2014

Fishing Hazard – Exposed Subsea Cable, Beam Trawl and Wire

Please be advised that, following entanglement with a subsea cable, a beam trawl and scallop gear have been discarded at the position below.

The fishing gear is entangled with the subsea cable and poses a significant hazard to fishing (L: 10m x H: 2m). There is also over 80m of exposed cable in the vicinity, due to the trawl dragging the cable from its original position.

The position is: 55°22.915'N 06°35.917'W

It was advised that the fishermen cut away both sides of his fishing gear and up to 200 fathoms of wire rope.

For further information: Alasdair Wilkie, Hibernia, Email: alasdair.wilkie@hibernianetworks.com, Tel: +44 1704 322 306, Mobile: +44 7850 770 577

Please exercise extreme caution whilst fishing in this area.
