Eday to Westray 33kV – Cable Repair

Mariners are advised that Briggs Marine Contractors Limited are undertaking repair activities on the subsea power cable between Eday and Westray, Orkney.

The works are being carried out adjacent to the islands of Faray and Rusk Holm, with operations centring around 59°12.72’N 02°50.29’W and a potential working corridor in excess of 250m either side of this location, stretching roughly 1km towards Westray. Operations commenced on 6th May 2016 and will continue for approximately 7 days.

Operations will be carried out from the vessels Forth Guardsman, Forth Sentinel and Forth Fighter. Forth Guardsman will perform cable repair operations and Forth Sentinel diving operations, both using 4 point mooring patterns. Forth Guardsman will be supported by Forth Fighter as Anchor Handling Tug.

Mariners should note that although all project vessels will be clear of the work site from the afternoon of 13th May 2016, the cable repair has not yet been completed and vessels will return to site after the predicted inclement weather improves. A buoy will be in place, marking the cable end location.

During operations, Forth Guardsman, Forth Fighter and Forth Sentinel will be restricted in the ability to manoeuvre. It is requested that all vessels operating within this area maintain a safe distance and pass at minimum speed.

Operations will be carried out on a daylight hour basis; however, vessels will remain on anchors at the location on a 24 hour basis. During these times, the vessels will display the appropriate day shapes/signals and at times of reduced visibility the appropriate lights as required by the IRPCS. The vessels will also actively transmit an AIS signal. A continuous listening watch will be maintained on VHF Channel 16 and DSC.

Notice To Fishermen
Published: 17 December 2012 | Latest Update: 21 May 2015

Exposed Cable Sections – SHEFA 2 Subsea Cable

The Shefa-2 submarine cable, running between Banff, Orkney, Shetland and Faroes has suffered from several cable breaks since deployment in 2007. A re-deployment was completed successfully late in 2014 and the majority of exposed areas are now buried.

However, Shefa urgently has to stress that a further few areas of the Shefa-2 segment 7, 8 & 9 are unburied and therefore exposed. Especially we need to highlight a limited exposed area on the segment running between Manse bay in Orkney and Banff in Scotland between the following positions:

A: 58°47.208’N 002°46.617’W and B: 58°47.300’N 002°46.763’W

This area represents a hazard to fishing and should be avoided at all times. The latest route of the cable may be seen on the KIS-ORCA Fishing Plotter disk released January 2015 and may be downloaded from www.kis-orca.eu/downloads

For a copy of the Kingfisher Awareness Flyer, showing the exposed sections of SHEFA from December 2013, please contact the undersigned. Alternatively, click on the link below, or visit www.kingfishercharts.org

Notice To Fishermen

Cable Repairs – Concerto 1 North

Recently there have been several repairs to the Concerto 1 North cable due to the mobile nature of the seabed. These repairs are post repair buried but remain more vulnerable than other sections of the cable. For all details of the current status of the cable please see the up to date Kingfisher Awareness Flyer. This may be obtained by clicking the link below or by visiting www.kingfishercharts.org

Please note that the following chart has been updated.

Kingfisher Flyer: Concerto 1 North Cable

For further information: Neil Donovan, Interoute Communications Ltd, email: neil.donovan@interoute.com

Notice to Fishermen

Hazardous Condition of Cable – Ulysses South Landing (St Margaret’s Bay)

Please note that further to earlier notices, the Ulysses South submarine cable landing at St Margaret’s Bay, near Dover, remains broken at position: 51°08.70’N 01°24.06’E. This position lies approximately 1.3km offshore in a water depth of 15 metres.

As a result of this fault, the cable at the approaches to St Margaret’s Bay has been dragged an indeterminate distance to the north of its as laid route on either side of the fault position. Caution should therefore be exercised in this area until the cable repair operation has been carried out.

A map of the hazardous position may be seen by clicking on the ‘Map Link’ in the top right corner

For further information: Steven Bennett, Global Marine, Tel: +44 7557 908179 email: Steven.bennett@globalmarinesystems.com
Exposed Cable Sections – Apollo South Cable (Southwest Approaches)

On behalf of Apollo SCS Ltd, fishermen are advised that following a recent repair to the Apollo South subsea telecoms cable there now exists a section of exposed/unburied cable in the vicinity of 49°04.76N Long 006°41.59W

Due to the nature of the seabed in this area the cable is exposed and could be a hazard to fishing. Fishermen are asked to ensure that they have the route of the Apollo South cable accurately plotted on their fishing charts. Trawler skippers are respectfully asked to exercise caution when trawling in the vicinity of the Apollo South cable and to keep beyond a distance of at least 500 metres from the charted cable route and where at all possible to avoid trawling directly over the cable route. Static gear fishermen are advised not to deploy anchors and end weights in close proximity of the cable.

For further information: Colin Richards, Apollo SCS, Tel: +44(0) 1404 46323 email: colinrichards@networkmarinefsnet.co.uk

Exposed Cable Sections – CIEG Guernsey (Jersey 90kv Subsea Power)

Due to repair works, two sections of cable remain unburied. Cables and joints are lying exposed on the sea bed and are a hazard to fishing and at risk of being damaged.

Cable Repair 1 – Jersey to Guernsey (2012)
The repaired sections lay between 49°22.736'N 002°29.220'W and 49°22.360'N 002°28.494'W and has a hairpin bight facing west south west extending for 370 meters to 49°22.610'N 002°29.412'W as shown in the image within the Map Link.

The repaired sections lay between 49°26.965'N 002°31.422'W to 49°26.873'N 002°31.125'W where it then heads south to 49°26.584'N 002°31.191'W. The hairpin bight facing west south west extending for 70 meters to 49°26.887'N 002°31.321'W as shown in the image within the Map Link.

Please exercise caution when carrying out work such as trawling in these areas.

For further information: Heidi Le Noury, Channel Island Electricity Grid, Tel: +44(0)14781 241977, Email: Heidi.LeNoury@electricity.gg

Exposed Cable Sections – Hugo Seg 1

Due to work on the Hugo subsea cable, there remains vulnerable and hazardous sections. Due to the nature of the sea bed, although all efforts had been made to bury the cable and associated joint boxes, only minimal or reasonable coverage was achieved.

Section 1 – Repair section of over 4km including final splice bight (minimal coverage)
Extreme caution should be exercised if working between: 49°39.163N 004°59.495W and 49°38.310N 004°56.427W
Section 2 – Repeater installation at 49°35.576N 4°46.785W (minimal coverage)
Extreme caution should be exercised if working between: 49°35.657N 004°47.079W and 49°35.519N 004°46.553W
Section 3 – Repeater installation at 49°36.675N 3°35.045W (reasonable coverage)
Caution should be exercised if working between: 49°36.671N 003°35.332W and 49°36.675N 003°34.752W

For further information: Jon Ford at Vodafone, Tel: +44 7776 165571 email: jon.ford@vodafone.com
Notice To Fishermen

Western HVDC Link Power Cable – Installation, Exposed Cable & Survey

Mariners are advised that work on the installation of the second deep water cable of the Western HVDC Link in the Irish Sea is due to resume end of April 2016. Installation campaign will take place over a distance of about 120km, starting to the west of the Isle of Man and finishing in the southern part of the Firth of Clyde.

This cable laying Campaign will involve a pre-lay survey of the cable route, a pre-lay grapnel run, then the laying of the cable, and finally a post-lay survey. All of this work will be carried out by the vessels Go Pegasus IBPU and Giulio Verne V7CE4. The work will be carried out between the following locations:–

- Start: 53°31.646’N 003°33.464’W Finish: 53°54.900’N 005°01.332’W

Pre-Lay Survey and Pre-Lay Grapnel Run

After surveying the route, Go Pegasus carried out a Pre Lay Grapnel Run (PLGR). This operation ensured that the cable route is clear from any obstructions that could hamper cable burial. Sonar markers were installed at cable and pipeline crossings during the PLGR to ensure that the cable is layed across the mattresses at these locations.

Cable laying and burial work will be carried out by the cable laying vessel Giulio Verne, accompanied by the vessel Go Pegasus. During cable laying operations, the Go Pegasus will follow the Giulio Verne at a distance of approximately 500m, and will tow a cable burial plough, providing for simultaneous burial.

The cable will not be buried where it crosses existing cables or pipelines, and also at locations where the seabed character prevents cable burial. At crossing locations and other areas where the cable is exposed, guard vessels shall monitor the cable until appropriate post-lay protection can be carried out. The cable crossings and locations of exposed cable are all specified in the latest Notice to Mariners (available here).

Vessels are requested to pass at a safe speed and distance from these locations and fishing vessels are advised to remain a safe distance (approx. 1.5 nautical miles) from the areas identified to ensure the safety of the vessel and its crew.

The Notices to Mariners currently issued for this project are:–

- Deep Water Cable Installation (Campaign 2) - this is the activity described above. Cable installation campaign 2 is due to be carried out between April and June 2016. The notice can be downloaded here.
- Route clearance, Out of Service Cables - this notice advises of work being carried out at 7 locations along the cable route to remove out of service cables that would prevent the burial of the Western HVDC Link cable. The notice can be downloaded here.
- Wet storage of cable - this notice advises of the surface laying of a 28km stretch of cable in temporary "wet storage" along part of the Western HVDC Link cable route. The notice can be downloaded here.
- Deep Water Cable Installation (Campaign 1) - this was carried out by the vessel Giulio Verne, starting in July 2015. The most up to date Notice to Mariners can be downloaded here.
- Concrete mattressing - along the cable route concrete mattresses have been laid at crossings of existing cables and pipelines. A notice to mariners about the mattressing campaign conducted earlier this year can be downloaded here.

For further information: Jim Andrews, Fisheries Liaison Officer, Tel: +44(0)7908225865 email: jim@awjmarine.co.uk
Notice to Fishermen

Cable Repair – UK – Hibernia Segment A

Global Marine Systems Ltd has been contracted to undertake an emergency repair to the Hibernia Segment A submarine fibre optic telecommunications cable in the Irish Sea.

A suitable weather window has been identified to complete the emergency repair to the Hibernia Segment A fibre optic telecommunications cable in the Irish Sea.

The CS Wave Sentinel is scheduled to arrive on site early morning 8th April 2016 to commence works.

The estimated location is 53°55.127’N 04°29.619’W and the duration of the cable repair will be approximately 5 days depending upon weather or other operational conditions.

The vessel will be limited in manoeuvrability and other vessels should maintain a distance of at least 1NM from the cable ship during operations, and 1/4NM from any cable buoys in place during the course of the repairs for safety.

For further information: John Wrottesley, Global Marine Systems Ltd, Tel: +44 (0)1245 72009  email: John.Wrottesley@globalmarinesystems.com

Notice to Fishermen

Moyle Returns Cable Project – Rock Protection

The vessel Rockpiper completed rock protection work on the southern Moyle returns cable on the 14th December 2015.

Maps that show the locations where rock has been placed on both the North and South cable routes, along with a spreadsheet for each cable that shows the latitude and longitude of the locations where rock has been placed, along with the actual tonnage of rock that has been be placed at each location can be downloaded below.

North cable: Maps 1 - 2 - 3 - 4 - 5; Spreadsheet.  South cable: Maps 1 - 2 - 3 - 4 - 5; Spreadsheet.

Further cable protection work is scheduled for shallow water sections of the cable during early summer 2016. Divers are due to carry out trenching works in waters shallower than 5m deep at both the Scottish and Northern Irish ends of the south cable. A small barge will be used to carry out rock placement works in waters between 5-12m deep.

The cable has been protected in these shallow waters with uraduct and iron casings as a precaution prior to the completion of inshore protection works.

Guard vessels have been stationed in these shallow waters with uraduct and iron casings as a precaution prior to the completion of inshore protection works.

Guard vessels have been stationed during cable installation and burial to ensure the safety of marine users. These guard vessels have now been stood down from the project.

For further information: Jim Andrews, Fisheries Liaison Officer, Tel: +44(0)7908225865  email: jim@awjmarine.co.uk
Notice to Fishermen

Exposed Cable and Poor Burial – Sirius South Cable

Mariners are advised that there is sections of Exposed Cable & Poor Burial of this section of the Sirius South Cable.

From: 53°43.383’N 4°20.306’W | To: 53°43.383’N 4°20.306’W

Also Exposed Section of Cable: 53°43.383’N 4°20.306’W

For further information: Peter Jamieson, Virgin Media, email: peter.jamieson@virginmedia.co.uk

Notice To Fishermen

Hazard - Hibernia Segment C – Abandoned Gear & Vulnerable Cable

Incident involving a fishing vessel snagging its gear. GMSL’s understanding is the MCA advised the vessel (Siobhan 3) to slip it’s gear due to the proximity of the Hibernia Segment C subsea cable

The position given was 53°50.340’N:004°55.832’W, south of the Isle of Man, although it cannot be confirmed if the gear was snagged on the cable.

For further information: Steven Bennett, Global Marine Systems Ltd, Tel: +44 1245 702113 email: Steven.Bennett@globalmarinesystems.com

Notice To Fishermen

Fishing Hazard – Exposed Subsea Cable, Beam Trawl and Wire

Please be advised that, following entanglement with a subsea cable, a beam trawl and scallop gear have been discarded at the position below.

The fishing gear is entangled with the subsea cable and poses a significant hazard to fishing (L: 10m x H: 2m). There is also over 80m of exposed cable in the vicinity, due to the trawl dragging the cable from its original position.

The position is: 55°22.915’N 06°35.917’W

It was advised that the fishermen cut away both sides of his fishing gear and up to 200 fathoms of wire rope.

For further information: Alasdair Wilkie, Hibernia, Email: alasdair.wilkie@hibernianetworks.com, Tel: +44 1704 322 306, Mobile: +44 7850 770 577
Mainland to Jura 33kV Submarine Cable – Post Protection Works

As per Marine Scotland licence number 05305/14/0 Scottish Hydro Electric Power Distribution (SHEPD) are to protect the Mainland to Jura subsea cable down to the 50m contour.

Mariners are advised that the recent post protection works undertaken by SHEPD are not yet fully complete and our protection installation vessels are not currently in the vicinity of the cable.

Mariners should note that the following locations are not yet protected:

Jura Shore End - Cable not yet protected
56°02.529'N 005°45.373'W  0m Contour
56°02.578'N 005°45.267'W  12m Contour
56°02.632'N 005°44.993'W  30m Contour
56°02.597'N 005°44.860'W  45m Contour

Main Shore End - Cable not yet protected
56°01.773'N 005°38.559'W  0m Contour
56°01.858'N 005°38.621'W  12m Contour
