* The Hazard List is a collection of potential fishing hazards supplied to Kingfisher from across all offshore industries. Potential hazards will be listed for 6 months.
**Notice to Fishermen**

**Moray HVDC Link – The Caithness**

The Caithness - Moray HVDC Link will be a twin bundled High Voltage DC interconnector (single cable diameter 132mm) installed by ABB HVC for Scottish Hydro Electric Transmission (SHE Transmission) stretching approximately 113 km across the Moray Firth from Portgordon in Moray to Noss Head in Caithness.

A trench backfill trial will take place from mid August for a period up to 30 days in the vicinity of

58°19.467’N  002°41.547’W

Depending upon prevailing weather conditions at the time, route A or B will be selected for the trials. During the period of the trials there will be a working area 1km wide and 2 km long defined by the coordinates below and we would request other mariners to stay clear.

**Notice To Fishermen**

**Exposed Cable Sections – SHEFA 2 Subsea Cable**

The Shefa-2 submarine cable, running between Banff, Orkney, Shetland and Faroes has suffered from several cable breaks since deployment in 2007. A re-deployment was completed successfully late in 2014 and the majority of exposed areas are now buried.

However, Shefa urgently has to stress that a further few areas of the Shefa-2 segment 7, 8 & 9 are unburied and therefore exposed. Especially we need to highlight a limited exposed area on the segment running between Manse bay in Orkney and Banff in Scotland between the following positions:

A: 58°47.208’N 002°46.617’W and  B: 58°47.300’N 002°46.763’W

This area represents a hazard to fishing and should be avoided at all times. The latest route of the cable may be seen on the KIS-ORCA Fishing Plotter disk released January 2015 and may be downloaded from www.kis-orca.eu/downloads

For a copy of the Kingfisher Awareness Flyer, showing the exposed sections of SHEFA from December 2013, please contact the undersigned. Alternatively, click on the link below, or visit www.kingfishercharts.org

*For further information:* Tel: +298243602, Email: phv@ft.fo, brr@ft.fo

---

Cable Repairs – Concerto 1 North

Recently there have been several repairs to the Concerto 1 North cable due to the mobile nature of the seabed. These repairs are post repair buried but remain more vulnerable than other sections of the cable. For all details of the current status of the cable please see the up to date Kingfisher Awareness Flyer. This may be obtained by clicking the link below or by visiting www.kingfishercharts.org

Please note that the following chart has been updated.

For further information: Neil Donovan, Interoute Communications Ltd, e-mail: neil.donovan@interoute.com

Hazardous Condition of Cable – Ulysses South Landing (St Margaret’s Bay)

Please note that further to earlier notices, the Ulysses South submarine cable landing at St Margaret’s Bay, near Dover, remains broken at position: 51°08.70’N 01°24.06’E. This position lies approximately 1.3km offshore in a water depth of 15 metres.

As a result of this fault, the cable at the approaches to St Margaret’s Bay has been dragged an indeterminate distance to the north of its as laid route on either side of the fault position. Caution therefore be exercised in this area until the cable repair operation has been carried out.

A map of the hazardous position may be seen by clicking on the ‘Map Link’ in the top right corner

For further information: Steven Bennett, Global Marine, Tel: +44 7557 908179 email: Steven.bennett@globalmarinesystems.com
North Coast of Cornwall – Wave Hub Subsea Cable Safety Notification

Please be advised that following the recent installation of the Wave Hub Cable Tail Extensions across the offshore Renewable Energy Development Area that the subsea electrical system is now live at 33kV. The following safety information should be carefully digested by any mariner operating in the vicinity of the Wave Hub offshore site or export cable:

1) Four new and exposed cable tails have been installed across the charted offshore Renewable Energy Development Area (KP chart and RPLs attached). These cables are stabilised against current and wave action and supported where free-spans occur with rock bags but are not otherwise protected from anchors or fishing gear.

2) Due to varying sediment depths, the Wave Hub main export cable remains exposed in places in St Ives Bay. From KP 1.9 to KP 8.1 the subsea power cable is in parts exposed or carries a high risk of exposure (KP chart and RPLs attached). From the shore to KP1.9 the subsea power cable is buried and from KP 8.1 to the Wave Hub itself (KP 25) the subsea power cable is surface laid and covered by a continuous rock berm.

Cable exposure limits (Wave Hub subsea export cable):

For further information: Julius Besterman, Wave Hub, Tel: 01736 800291, Mobile: 07825 943738  [http://www.wavehub.co.uk/notice-to-mariners](http://www.wavehub.co.uk/notice-to-mariners)
**Exposed Cable Sections – CIEG Guernsey (Jersey 90kv Subsea Power)**

Due to repair works, two sections of cable remain unburied. Cables and joints are lying exposed on the sea bed and are a hazard to fishing and at risk of being damaged.

**Cable Repair 1 – Jersey to Guernsey (2012)**
The repaired sections lay between 49°22.736’N 002°29.220’W and 49°22.360’N 002°28.494’W and has a hairpin bight facing west south west extending for 370 meters to 49°22.610’N 002°29.412’W as shown in the image within the Map Link.

**Cable Repair 2 – Jersey to Guernsey (2015)**
The repaired sections lay between 49°26.965’N 002°31.422’W to 49°26.873’N 002°31.125’W where it then heads south to 49°26.584’N 002°31.191’W. The hairpin bight facing west south west extending for 70 meters to 49°26.887’N 002°31.321’W as shown in the image within the Map Link.

Please exercise caution when carrying out work such as trawling in these areas.

*For further information: Heidi Le Noury, Channel Island Electricity Grid, Tel: +44(0)14781 241977, Email: Heidi.LeNoury@electricity.gg*

---

**Hugo Seg 1 – Cable Repairs**

Due to work on the Hugo subsea cable, there remains vulnerable and hazardous sections. Due to the nature of the sea bed, although all efforts had been made to bury the cable and associated joint boxes, only minimal or reasonable coverage was achieved.

**Section 1 – Repair section of over 4km including final splice bight (minimal coverage)**
Extreme caution should be exercised if working between: 49°39.163N 004°59.495W and 49°38.310N 004°56.427W

**Section 2 – Repeater installation at 49°35.576N 4°46.785W (minimal coverage)**
Extreme caution should be exercised if working between: 49°35.657N 004°47.079W and 49°35.519N 004°46.553W

**Section 3 – Repeater installation at 49°36.675N 3°35.045W (reasonable coverage)**
Caution should be exercised if working between: 49°36.671N 003°35.332W and 49°36.675N 003°34.752W

*For further information: Jon Ford at Vodafone, Tel: +44 7776 165571 email: jon.ford@vodafone.com*
Western HVDC Link – Deep Water Cable Installation & Exposed Cable

Mariners are advised that the vessel Nordnes is due to commence Post Lay Installation Rock Placement Works along part of the Western HVDC Link cable route, starting in late September 2016. This update provides a brief summary of the detail included in the Notice to Mariners describing this work, which can be downloaded here.

Post Lay Installation Burial Works: Post Lay Installation Rock Placement Works are due to be carried out by the vessel Nordnes. This work will be carried out along parts of the installed cable on the southern part of the cable route, to the south of the Isle of Man.

Rock will be placed on sections of cable that remain exposed following the Post Lay Installation Burial works that were carried out earlier in September. The locations for rock placement are all illustrated and listed in the in the NIM about these works. The work is due to commence in late September 2016 and to be completed in October 2016.

The notice to mariners describing this work can be downloaded here.

Vessel details: Nordnes rock replacement Vessel | Call sign PHOG The vessel will be monitoring VHF Channel 16 throughout the operation. The vessel involved in this work will be restricted in its ability to manoeuvre and other vessels are reminded to navigate with caution in their vicinity and pay strict attention to instructions issued to them by navigation authorities.

Exposed cable locations

There are several sections of exposed cable along the cable route including the planned cable crossing locations previously communicated through notice to mariners. These sections are currently being monitored by Guard Vessels which have been deployed locally. To assist all mariners, a consolidated list of exposed cable locations has been compiled and can be downloaded here. Vessels are requested to pass at a safe speed and distance and fishing vessels are advised to remain a safe distance (approximately 1.5 nautical miles) from the areas identified. Guard Vessels have been deployed at each location to aid in monitoring the exposed areas and advise of safe distances locally. The locations of these exposed sections are shown in Table 1 of the Notice to Mariners which can be downloaded here.

Guard vessels have been stationed along the cable route during installation and burial to ensure the safety of marine users. They will remain in position until cable protection operations are completed to advise mariners of the location of exposed cable.

In areas where the cable crosses other cables and pipelines that are in service, the guard vessels will remain on station until cable protection has been completed in these locations (either through concrete matressing or rock placement). The Notices to Mariners that are presently in force for this project are:-

- Post Lay Installation Burial Works - this is the notice described above. It was issued on 20th September 2016 and provides information about the proposed rock placement work for Campaigns 1 & 2 of the cable route which will be carried out between September and October 2016. The notice can be downloaded here.
- Deep Water Cable Installation, Irish Sea - this notice was issued on 7th September 2016 and provides an update on upcoming survey and cable installation work. The notice can be downloaded here.
- Post Lay Installation Burial Works - this notice was issued on 24th August 2016 and provides information about the proposed cable burial works for Campaigns 1, 2 & 3 of the cable route which will be carried out between September and November 2016. The notice can be downloaded here.
- Deep Water Cable Installation, Irish Sea - this notice was issued on 20th August 2016 and confirms that the cable to the south of the Isle of Man has been recovered and buried, and provides an update on ongoing survey and cable installation work. The notice can be downloaded here.
- Deep Water Cable Installation, Irish Sea - this notice was issued in August 2016 and provides an update on progress and a notice of activities associated with the recovery and installation of the cable to the south of the Isle of Man. The notice can be downloaded here.
- Exposed cable locations, Irish Sea - this notice was issued in August 2016 and provides an update on the locations of exposed cable areas which are awaiting protection. The notice can be downloaded here.
- Concrete matressing - along the cable route concrete mattresses have been laid at crossings of existing cables and pipelines. A notice to mariners about the matressing campaign conducted earlier this year can be downloaded here.

For further information: Jim Andrews, Fisheries Liaison Officer, Tel: +44(0)7908225865 email: jim@awimarine.co.uk

Western HVDC Link - Deep Water Cable Installation & Exposed Cable
Moyle Returns Cable Project – Rock Protection

This is a further update on rock protection work on the Moyle Returns Cables in the North Channel of the Irish Sea.

Progress of inshore survey & cable protection works
The inshore cable protection and survey works being carried out by the vessels Coastworker and Coastrunner and detailed in the earlier Notice to Mariners here have now been completed.

Intertidal and shallow subtidal cable protection works
Cable protection works are being completed at the Northern Irish landfall of the cable in the intertidal zone and in waters to a depth of 1.5m by an excavator. This work will be carried out between the 6th and 9th July 2016. It will not involve any vessels. A Notice to Mariners describing this work can be downloaded here.

North Channel & NI waters: survey of marine assets
A survey of marine assets operated by Mutual Energy is due to be conducted over the next 3 weeks by the vessels Noordhoek Pathfinder (offshore works) and SV Volans (nearshore works). A Notice to Mariners describing this survey work can be downloaded here.

For further information: Jim Andrews, Fisheries Liaison Officer, Tel: +44(0)7908225865  email: jim@awjmarine.co.uk

Exposed Cable and Poor Burial – Sirius South Cable

Mariners are advised that there is sections of Exposed Cable & Poor Burial of this section of the Sirius South Cable.

From: 53°43.383’N 4°20.306’W  To: 53°43.383’N 4°20.306’W

Also Exposed Section of Cable:  53°43.383’N 4°20.306’W

For further information: Peter Jamieson, Virgin Media, email: peter.jamieson@virginmedia.co.uk

Hazard - Hibernia Segment C – Abandoned Gear & Vulnerable Cable

Incident involving a fishing vessel snagging its gear. GMSL’s understanding is the MCA advised the vessel (Siobhan 3) to slip its gear due to the proximity of the Hibernia Segment C subsea cable.

The position given was 53°50.340N:004°55.832W, south of the Isle of Man, although it cannot be confirmed if the gear was snagged on the cable.

For further information: Steven Bennett, Global Marine Systems Ltd, Tel: +44 1245 702113  email: Steven.Bennett@globalmarinesystems.com
Notice To Fishermen

Fishing Hazard – Exposed Subsea Cable, Beam Trawl and Wire

Please be advised that, following entanglement with a subsea cable, a beam trawl and scallop gear have been discarded at the position below.

The fishing gear is entangled with the subsea cable and poses a significant hazard to fishing (L: 10m x H: 2m). There is also over 80m of exposed cable in the vicinity, due to the trawl dragging the cable from its original position.

The position is: 55°22.915’N 06°35.917’W

It was advised that the fishermen cut away both sides of his fishing gear and up to 200 fathoms of wire rope.

Please exercise extreme caution whilst fishing in this area.

For further information: Alasdair Wilkie, Hibernia, Email: alasdair.wilkie@hibernianetworks.com, Tel: +44 1704 322 306, Mobile: +44 7850 770 577.
Notice To Fishermen

Cable Repairs – TAT 14 (Segment K)

During the last four years there have been several repairs to the TAT 14 segment K cable North of Scotland from the Fair Isle Channel to the Continental Shelf edge and slope. For all details on the current status of the cable please see the up to date Kingfisher Awareness Flyers. These may be obtained by clicking on the links below, or by visiting www.kingfishercharts.org

Please note that the following charts have also been updated:

- Kingfisher Flyer: Sprint 2013 - ENGLISH
- Kingfisher Flyer: Sprint 2013 - FRENCH
- Kingfisher Flyer: Sprint 2013 - FAROESE
- Kingfisher Flyer: Sprint 2013 - RUSSIAN
