Support

The Kingfisher Bulletin is provided by the Kingfisher Information Service of Seafish, to promote the awareness of offshore hazards to fishing, new structures and zones and conflicting offshore operations. Support for the production of subsea cables industry information is received from The Crown Estate and the European Subsea Cables Association (ESCA).

Information

Information contained within the Kingfisher Bulletin comes from a variety of sources, although is in the majority, supplied directly to Kingfisher from the offshore operating industry, or government licensing authorities.

Coordinates within the Kingfisher Bulletin are converted into World Geodetic System 1984 (WGS84) and displayed as degrees, minutes and decimal minutes, to three decimal places (ddd°mm.mmm'). Route or boundary coordinates may be simplified for ease of use.

Disclaimer and Limitation of Liability

Whilst reasonable steps have been taken to ensure its accuracy, the data contained in this Bulletin (“Bulletin Data”) is not verified. Neither Seafish nor The Crown Estate or the European Subsea Cables Association (ESCA) (together the “Parties” and each a “Party”) makes any warranty, express or implied, as to accuracy, completeness or suitability for any particular purpose of the Bulletin Data. Except for any liability which cannot be excluded or limited by applicable law, none of the Parties shall have any liability to You, meaning any person, firm, partnership, corporate body or any other legal person receiving or otherwise using, or benefitting from the use of, Bulletin Data for any damage or losses (including indirect, incidental, special or consequential loss or damage) caused by any: (i) use of the Bulletin Data, or (ii) error or omission in the Bulletin Data. Notwithstanding the foregoing exclusion of liability, in the event that any of the Parties are found liable to You, then the Parties’ entire liability in such event, whether in contract, delict (including negligence) or otherwise, shall not exceed £1,000. The Admiralty Notices to Mariners should also be consulted.

Notice To Fishermen

Caithness - Moray HVDC Link

Placement of Rock Bags
The CM cable is currently wet stored off Portgordon (see chart below). NKT will strategically place 11 rock bags on the cable and carry out an ROV survey of their positions using the vessel EDT Jane during the period 06 November 2017 to 20 November 2017 depending on weather. In addition, 5 rock bags placed on the cable previously will be checked for condition and position.

</tr>
</tbody>
</table>

There is a 250m exclusion zone either side of the wet stored cable and all vessels are requested to stay out of this area until such time as NKT advise otherwise. A guard vessel has been assigned to patrol this area for the foreseeable future.

Rock Placement Area
During the period November 2017 to end January 2018 NKT will undertake rock placement operations with the vessel Atlantis. The works comprise the installation of a 3 layer rock berm of which the first 2 layers will be installed by the DP fall pipe vessel Seahorse. The final armour layer will be installed by the vessel Atlantis equipped with a crane for the controlled handling of the large armour blocks. The vessel Coastal Sensor II will carry out surveys during the rock placement operations. To assist the vessel to hold station in the tidal currents at the work location 4 pre-installed mooring buoys will be located in the working area below

During the period November to December 2017 (depending on weather), NKT will use the vessel NKT Victoria LAWV7 to carry out the planned operation to lift the cable ends to deck from two previous laying campaigns, carry out jointing and lay the completed omega joint back on the seabed at the location : 58° 06.331'N 02°35.495'W. The vessel will be on DP throughout this operation (approx. 7 days) and other seafarers are requested to keep clear.

Removal of stuck cable Update
HDD’s 1-4 at Portgordon were successfully drilled earlier in 2017. During cable pull in through HDD 4 in July the cable became stuck after 737m and could not be pulled back. The cable duct will be pushed out from the shore side drill site using a drill rig and the addition of new 274 mm cable ducts to the end of the pre-installed duct until the section of stuck cable has been removed. WB1 and Woodstock will return to site on Friday 3 November 2017 and may be there throughout November

Exposed Cable Sections – SHEFA 2 Subsea Cable

The Shefa-2 submarine cable, running between Banff, Orkney, Shetland and Faroes has suffered from several cable breaks since deployment in 2007. A re-deployment was completed successfully late in 2014 and the majority of exposed areas are now buried.

However, Shefa urgently has to stress that a further few areas of the Shefa-2 segment 7, 8 & 9 are unburied and therefore exposed. Especially we need to highlight a limited exposed area on the segment running between Manse bay in Orkney and Banff in Scotland between the following positions:

A: 58°47.208’N 002°46.617’W and B: 58°47.300’N 002°46.763’W

This area represents a hazard to fishing and should be avoided at all times. The latest route of the cable may be seen on the KIS-ORCA Fishing Plotter disk released January 2015 and may be downloaded from www.kis-orca.eu/downloads

For a copy of the Kingfisher Awareness Flyer, showing the exposed sections of SHEFA from December 2013, please contact the undersigned. Alternatively, click on the link below, or visit www.kingfishercharts.org

Notice To Fishermen

Cable Repairs – IFA 2000

As communicated in March 2017, the repair of four cables of IFA 2000 link has been completed, but some lengths of these power cables are still exposed and represent a hazard for Fishermen (and the cables themselves).

Caution should therefore be exercised in this area until the protection operations have been carried out.

Six marking buoys securing the area have been left on site.

The positions of the buoys are:

51° 04.761' N 1° 16.849' E
51° 04.468' N 1° 17.008' E
51° 04.545' N 1° 16.409' E

And

51° 03.627' N 1° 15.929' E
51° 03.770' N 1° 16.610' E
51° 04.027' N 1° 15.763' E

For further information: Valerie LEROY, Louis Dreyfus Tel: +33(0)4 42 18 34 11 email: vleroy@ldtravocean.com
Notice to Fishermen

NorSeaCom Seg 3 – Cable Repairs

Global Marine has been contracted to undertake three emergency repair operations to the NorSea Com-1 Seg 3 submarine fibre optic telecommunications cable in the North Sea.

The CS Wave Sentinel is due to arrive on site 0100hrs Tuesday 14 November 2017, to commence repair works. The estimated locations and planned order of works are as follows:

- 1st Location: 53°12.212’N 02°24.229’E
- 2nd Location: 52°56.584’N 02°23.989’E
- 3rd Location: 52°32.790’N 02°13.615’E

The duration of the cable repairs will be approximately 15 days depending upon weather and other operational conditions.

For further information: John Wrottesley, Global Marine Group, Tel: +44 1245 702009 email: john.wrottesley@globalmarine.group

Notice To Fishermen

Nemo Link – Cable Lay Cable Burial

Mariners are advised that the Nemo Link project will be carrying out cable burial activates from Pegwell Bay, UK along the Nemo cable route into French territorial waters. Cable burial will begin end September 2017.

The Havila Phoenix, using T3200 mechanical trencher and T1000 jet trencher, will bury the cable along the Nemo cable route up to a location in French territorial waters where the cable end is laid on the seabed.

- Cable lay from transpooling location to cable laydown end location : 27/09/17 to 11/11/17

Survey – Aquind Interconnector Survey

MMT, on behalf of Aquind Ltd, will be carrying out a Geophysical and Unexploded Ordinance (UXO) survey along the proposed UK section of the Aquind cable route, between Eastney, near Portsmouth and the limit of the UK EEZ.

Two additional support vessels are required - The FPV Morven will shadow the MV Seabeam (inshore survey vessel) and the Wessex Explorer will shadow the MV Franklin (offshore survey vessel). An offshore Fisheries Liaison Officer (FLO) will be stationed on each viewing vessel.

Notice To Fishermen

Cable Repairs – Concerto 1 North

Recently there have been several repairs to the Concerto 1 North cable due to the mobile nature of the seabed. These repairs are post repair buried but remain more vulnerable than other sections of the cable. For all details of the current status of the cable please see the up to date Kingfisher Awareness Flyer. This may be obtained by clicking the link below or by visiting www.kingfishercharts.org

Please note that the following chart has been updated.

For further information: Neil Donovan, Interoute Communications Ltd, e-mail: neil.donovan@interoute.com

Notice to Fishermen

Cable Protection Operations – Isles of Scilly Interlink Submarine Power Cable

CWind, part of Global Marine Group has been contracted to undertake cable protection operations to the Isles of Scilly Interlink submarine power cable in the Celtic Sea owned by Western Power Distribution.

The CS Recorder is due to arrive on site 12th November 2017 to commence mattressing operations. Three concrete mattresses 3m x 6m x Height 15cm Weight in Water 2700Kg will be deployed to provide additional security for the cable, and safety of other sea users. The estimated location is between the Isle of Scilly and Lands’ End approx.

50°04.730’N Long 005°53.856’W

The duration of the cable repair will be approximately 3 days depending upon weather or other operational conditions.

Please distribute this information accordingly so that other sea users are aware. The vessel will be limited in manoeuvrability. Other vessels should maintain a safe distance from the cable ship during operations.

For further information: John Wrottesley, Global Marine Group, Tel: +44 1245 702009 email: john.wrottesley@globalmarine.group

Exposed Cable Sections – Apollo South Cable (SW Approaches)

On behalf of Apollo SCS Ltd, fishermen are advised that following a recent repair to the Apollo South subsea telecoms cable there now exists a section of exposed/unburied cable in the vicinity of

49°04.76N Long 006°41.59W

Due to the nature of the seabed in this area the cable is exposed and could be a hazard to fishing. Fishermen are asked to ensure that they have the route of the Apollo South cable accurately plotted on their fishing charts. Trawler skippers are respectfully asked to exercise caution when trawling in the vicinity of the Apollo South cable and to keep beyond a distance of at least 500 metres from the charted cable route and where at all possible to avoid trawling directly over the cable route. Static gear fishermen are advised not to deploy anchors and end weights in close proximity of the cable.

For further information: Colin Richards, Network Marine, Email: colinrichards@networkmarine.co

Hugo Seg 1 – Cable Repairs

Due to work on the Hugo subsea cable, there remains vulnerable and hazardous sections. Due to the nature of the sea bed, although all efforts had been made to bury the cable and associated joint boxes, only minimal or reasonable coverage was achieved.

Section 1 – Repair section of over 4km including final splice bight (minimal coverage)
Extreme caution should be exercised if working between: 49°39.163N 004°59.495W and 49°38.310N 004°56.427W

Section 2 – Repeater installation at 49°35.576N 4°46.785W (minimal coverage)
Extreme caution should be exercised if working between: 49°35.657N 004°47.079W and 49°35.519N 004°46.553W

Section 3 – Repeater installation at 49°36.675N 3°35.045W (reasonable coverage)
Caution should be exercised if working between: 49°36.671N 003°35.332W and 49°36.675N 003°34.752W

Western HVDC Link – Deep Water Cable Installation

Mariners are advised that following recent survey work along the Western HVDC Link cable route an area of cable has been found to require rock protection to ensure that it is adequately buried. The location of this area is illustrated in a Notice to Mariners that can be downloaded here and is summarised below.

Location
The shallow water cable installation was completed in Liverpool Bay in 2015. Recent survey work has found that some remedial cable protection work is required to ensure that the cable is adequately buried. The area affected extends for approximately 450m. The location of this area is given below.

- From 053°31.649’N 003°33.459’W to 053°31.772’N 003°33.063’W

Fishing vessels are advised to remain a safe distance (approximately 1.5 nautical miles) from the area identified in the Notice to Mariners.

Guard vessels
A guard vessel is being mobilised to monitor this area and provide advice to mariners operating in the vicinity.

Notices to Mariners
The Notices to Mariners that are presently in place for this project are:-

- Western HVDC Link: Exposed cable, Liverpool Bay - this notice is described above. It was issued on the 11th October 2017 and provides information about a short length of exposed cable in Liverpool Bay. The Notice to Mariners can be downloaded here.

Hazard - Hibernia Segment C – Abandoned Gear & Vulnerable Cable

Incident involving a fishing vessel snagging its gear. GMSL’s understanding is the MCA advised the vessel (Siobhan 3) to slip it’s gear due to the proximity of the Hibernia Segment C subsea cable

The position given was 53°50.340N:004°55.832W, south of the Isle of Man, although it cannot be confirmed if the gear was snagged on the cable.

Notice To Fishermen

Fishing Hazard – Exposed Subsea Cable, Beam Trawl and Wire

Published: 19 December 2013 | Latest Update: 13 June 2014

Please be advised that, following entanglement with a subsea cable, a beam trawl and scallop gear have been discarded at the position below.

The fishing gear is entangled with the subsea cable and poses a significant hazard to fishing (L: 10m x H: 2m). There is also over 80m of exposed cable in the vicinity, due to the trawl dragging the cable from its original position.

The position is: 55°22.915’N 06°35.917’W

It was advised that the fishermen cut away both sides of his fishing gear and up to 200 fathoms of wire rope.

Please exercise extreme caution whilst fishing in this area.
