Notice to Fishermen

Regional Active Dredge Area Charts – Issue 20.5 now available

Regional Active Dredge Area (RADA) charts are routinely produced by the British Marine Aggregate Producers Association (BMAPA) and The Crown Estate on a bi-annual basis (charts are dated 31st January and 31st July) to show where dredging operations are currently permitted within existing marine aggregate production licences.

Areas where dredging is permitted are monitored through the approved Electronic Monitoring System (EMS) that is required to be installed on every marine aggregate dredger operating in UK waters.

Where there is a need to highlight regional changes to existing marine aggregate production licence areas, the industry will occasionally issue updated RADA charts outside of the bi-annual cycle. This ensures that the most up-to-date information on active dredge areas is available to other marine users.

Issue 20.5 of these charts (dated 6th October 2012) is now available to be downloaded from http://www.bmapa.org/issues/other_sea_users.php

The need for working areas within production licences can be defined through existing licence conditions or through individual marine aggregate operators’ voluntary management arrangements.

Any changes in area or zone from the previous issue (dated 31st July 2012) will be highlighted in red.

For further information on these charts can be obtained by contacting: bmapa@mineralproducts.org
